Kevin B. Wright (Ph.D., University of Oklahoma) is Professor in Communication at the University of Oklahoma. His research examines interpersonal communication, social support related to health outcomes, and computer-mediated relationships. He coauthored Health Communication in the 21st Century, and his research appears in over 45 book chapters and journal articles, including the Journal of Communication, Communication Monographs, the Journal of Social and Personal Relationships, Communication Quarterly Journal of Applied Communication Research, Health Communication, and the Journal of Computer-Mediated Communication. --

Technology has changed communication drastically in recent years, facilitating the speed and ease of communicating, and also redefining and shaping linguistics, etiquette, and social communication norms. The Handbook of Research on Computer Mediated Communication provides academics and practitioners with an authoritative collection of research on the implications and social effects computers have had on communication. With 69 chapters of innovative research contributed by over 90 of the world's leading experts in computer mediated communication, the Handbook of Research on Computer Mediated Communication is a must-have addition to every library collection.

This is a uniquely friendly and easy-to-understand treatment of the complex theories and findings that surround CMC. Communication is often complicated, and computerization makes it stranger still, yet the authors have deftly demystified both the miraculous and the mundane of computer-mediated interaction.

Caleb T. Carr introduces students to fundamental concepts, theories, and applications of computer-mediated communication. Building on CFO, SIP, SIDE, and hyperpersonal CMC theories, this engaging text gives students a framework for human communication across all existing and future digital channels.

Social platforms such as MySpace, Facebook and Twitter have rekindled the initial excitement of cyberspace. Text-based, computer-mediated communication has been enriched with face-to-face communication such as Skype, as users move from desktops to laptops with integrated cameras and related hardware. Age, gender and culture barriers seem to have crumbled and disappeared as the user base widens dramatically. Other than simple statistics relating to e-mail usage, chatrooms and blog subscriptions, we know surprisingly little about the rapid changes taking place. This book assembles leading researchers on nonverbal communication, emotion, cognition and computer science to summarize what we know about the processes relevant to face-to-face communication as it pertains to telecommunication, including video-conferencing. The authors take stock of what has been learned regarding how people communicate, in person or over distance, and set the foundations for solid research helping to understand the issues, implications and possibilities that lie ahead.

Excerpt Open publication The present handbook provides an overview of the pragmatics of language and language use mediated by digital technologies. Computer-mediated communication (CMC) is defined to include text-based interactive communication via the Internet, websites and other multimodal formats, and mobile communication. In addition to 'core' pragmatic and discourse-pragmatic phenomena the chapters cover pragmatically-focused research on types of CMC and pragmatic approaches to characteristic CMC phenomena.
