This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of ECG Made Easy and ECG in Practice for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

A caption explains the concept illustrated on each page, and a few simple sentences reinforce the concept with interactive ("programmed") learning, which links to the following page. --from publisher description.

A state-of-the-art reference on contemporary and challenging issues in electrocardiography. Amazingly, over a century after the first use of the electrocardiogram, new ECG patterns are being discovered. And in the last few decades, several new electrocardiographic phenomena and markers have emerged that are challenging to physicians and allied professionals who read and interpret ECGs such as early repolarization, ECGs of athletes, Brugada Syndrome, short and long QT syndrome, various channelopathies, and cardiomyopathies. Internationally recognized experts discuss the most recent evidence-based information on these new observations, complemented with detailed ECG tracings, to provide essential guidance for the optimal interpretation of ECGs in the 21st century. Audience: Physicians who are involved in sports medicine, emergency department physicians, internists, ECG readers, and pediatric and adult cardiologists.
