Instant Slic3r - Packt Publishing

Filled with practical, step-by-step instructions and clear explanations for the most important and useful tasks. Instant Slic3r follows a practical, recipe-based approach that will show you how to complete the various steps to turn 3D models into actual objects with a 3D printer.Instant Slic3r is for people new to 3D printing and its software, and also for people who are new to Slic3r. You will need to know the basics of 3D printing, and how to use your printer and the other software associated with it.

Planning algorithms are impacting technical disciplines and industries around the world, including robotics, computer-aided design, manufacturing, computer graphics, aerospace applications, drug design, and protein folding. This coherent and comprehensive book unifies material from several sources, including robotics, control theory, artificial intelligence, and algorithms. The treatment is centered on robot motion planning, but integrates material on planning in discrete spaces. A major part of the book is devoted to planning under uncertainty, including decision theory, Markov decision processes, and information spaces, which are the 'configuration spaces' of all sensor-based planning problems. The last part of the book delves into planning under differential constraints that arise when automating the motions of virtually any mechanical system. This text and reference is intended for students, engineers, and researchers in robotics, artificial intelligence, and control theory as well as computer graphics, algorithms, and computational biology.

Competitive eating vies with family expectations in a funny, heartfelt novel for middle-grade readers by National Book Award winner Pete Hautman. David can eat an entire sixteen-inch pepperoni pizza in four minutes and thirty-six seconds. Not bad. But he knows he can do better. In fact, he 'll have to do better: he 's going to compete in the Super Pigorino Bowl, the world 's greatest pizza-eating contest, and he has to win it, because he borrowed his mom 's credit card and accidentally put \$2,000 on it. So he really needs that prize money. Like, yesterday. As if training to be a competitive eater weren 't enough, he 's also got to keep an eye on his little brother, Mal (who, if the family believed in labels, would be labeled autistic, but they don 't, so they just label him Mal). And don 't even get started on the new weirdness going on between his two best friends, Cyn and HeyMan. Master talent Pete Hautman has whipped up a rich narrative shot through with equal parts humor and tenderness, and the result is a middle-grade novel too delicious to put down.

Proceedings of SPIE present the original research papers presented at SPIE conferences and other high-quality conferences in the broad-ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

The performance of software systems is dramatically affected by how well software designers understand the basic hardware technologies at work in a system. Similarly, hardware designers must understand the far-reaching effects their design decisions have on software applications. For readers in either category, this classic introduction to the field provides a look deep into the computer. It demonstrates the relationships between the software and hardware and focuses on the foundational concepts that are the basis for current computer design.

Instant Slic3r - Packt Publishing

"The dramatic story of the brain's role in creating our world, our experience of it, and ourselves; the basis for a PBS television series by the bestselling David Eagleman. How does a three pound mass of biological matter locked in the dark, silent fortress of the skull produce the extraordinary multi-sensory experience that comprises us, while also constructing reality and guiding us through the endless need to make decisions and determine our judgments and into a future that we are convinced we are shaping? David Eagleman compares the brain to a cityscape with different neighborhoods where neural networks vie for supremacy and determine our behavior in ways we are not always aware or in control. At the same time, he suggests that the brain works as a storyteller--creating a narrative that allows us to navigate and make sense of a world that it is busy constructing for us"--
