suggested by AbScent3; this can be repeated after six months to track progress. Many patients with loss of smell will also report loss of taste, however this usually reflects loss of flavour perception as a function of smell, rather than true taste ...

Anosmia and loss of smell in the era of covid-19 | The BMJ

Treatment for lost or changed sense of smell. Your sense of smell may go back to normal in a few weeks or months.

Treating the cause might help. For example, steroid nasal sprays or drops might help if you have sinusitis or nasal polyps. A treatment called smell training can also help some people. To find out more about smell training, see:

Lost or changed sense of smell - NHS

Short-term changes in smell and taste are common with infections affecting your upper respiratory tract, like colds and sinus infections. If this is the cause your smell and taste should generally return within two weeks. If you are worried about a persistent change in your sense of smell or taste, you should make an appointment with your GP.

Smell and Taste Disorders | Loss of Smell | Anosmia | Patient

Since the sense of smell usually diminishes due to age, the recovery could take longer and be less than complete for older adults. Savor what you can experience and engage the mind. To reawaken the olfactory nerves, most specialists recommend smell training, a daily routine of sniffing essential oils such as lemon, eucalyptus, cloves, rose, and others.
