task of considering all risks that could hinder the achievement of pre-established objectives. These risks can question the general strategy pursued by the company, to protect both individual and collectivity. The goal is to develop a security-oriented strategy that improve the perception by the user/patient, about the quality of the services provided. This strategy must be consistent with the acceptable level of risk that the company must consider, to achieve its objectives and its mission. It is also necessary to identify the appropriate tools, to achieve the risk reduction at the desired levels and to ensure the continuous improvement of clinical practice and quality, through the involvement of all clinical and organizational professionals.
