'This book was an absolute joy to read and offers a comprehensive review of health psychology.... This book should become a classic - necessary reading for students in all branches of health. Nursing students will find it invaluable, but other students - and their teachers - will also find it very useful. SAGE have added a valuable and important text to their already impressive list, and Marks can be complimented on his scholarly organisation of complex topics into an accessible and readable whole. No library should be without it and serious students should invest in a copy of their own' - Health Matters The Health Psychology Reader is designed to complement and support the recent textbook Health Psychology: Theory, Research and Practice by David F Marks, Michael Murray, Brian Evans and Carla Willig (SAGE, 2000). It can also be used as a stand-alone resource given its didactic nature. The Reader explores key topics within the health psychology field with incisive introductions to each section by the editor and includes a selection of the most important theoretical and empirical published work. The Reader is organized into the following parts: Part 1: Health Psychology's development, definition and context Part 2: Theories in health psychology Part 3: Health behaviour and experience Part 4: Beliefs, explanations and communication Part 5: Critical approaches to health psychology In each of these areas the editor has written introductory sections which highlight the key issues, questions and problems.

The past decade has seen increased attention to cost-effectiveness and benefit-cost analysis in education as administrators are being asked to accomplish more with the same or even fewer resources, philanthropists are keen to calculate their “ return on investment ” in social programs, and the general public is increasingly scrutinizing how resources are allocated to schools and colleges. Evaluation in Education: Cost-Effectiveness and Benefit-Cost Analysis (titled Cost-Effectiveness Analysis: Methods and Applications in its previous editions) is the only full-length book to provide readers with the step-by-step methods they need to plan and implement a benefit-cost analysis in education. Authors Henry M. Levin, Patrick J. McEwan, Clive Belfield, Alyshia Brooks Bowden, and Robert Shand examine a range of issues, including how to identify, measure, and distribute costs; how to measure effectiveness, utility, and benefits; and how to incorporate cost evaluations into the decision-making process. The updates to the Third Edition reflect the considerable methodological development in the evaluation literature, and the greater empiricism practiced by education researchers, to help readers learn to apply more advanced methods to their own analyses.

"This book covers the basics of traditional educational testing, measurement, and evaluation theory and methodology, as well as sociopolitical issues and trends influencing the future of that research and practice"--Publisher's description.

This volume in the JPS Series is intended to help crystallize the emergence of a new field, "Developmental Social Cognitive Neuroscience," aimed at elucidating the neural correlates of the development of socio-emotional experience and behavior. No one any longer doubts that infants are born with a biologically based head start in accomplishing their important life tasks — — genetic resources, if you will, that are exploited differently in different contexts. Nevertheless, it is also true that socially relevant neural functions develop slowly during childhood and that this development is owed to complex interactions among genes, social and cultural environments, and children ' s own behavior. A key challenge lies in finding appropriate ways of describing these complex interactions and the way in

which they unfold in real developmental time. This is the challenge that motivates research in developmental social cognitive neuroscience. The chapters in this book highlight the latest and best research in this emerging field, and they cover a range of topics, including the typical and atypical development of imitation, impulsivity, novelty seeking, risk taking, self and social awareness, emotion regulation, moral reasoning, and executive function. Also addressed are the potential limitations of a neuroscientific approach to the development of social cognition. Intended for researchers and advanced students in neuroscience and developmental, cognitive, and social psychology, this book is appropriate for graduate seminars and upper-level undergraduate courses on social cognitive neuroscience, developmental neuroscience, social development, and cognitive development.

Persuasion: Theory and Research, Third Edition is a comprehensive overview of social-scientific theory and research on persuasion. Written in a clear and accessible style that assumes no special technical background in research methods, the Third Edition has been thoroughly revised to reflect developments in persuasion studies. New discussions of subjects such as reactance and the use of narratives as vehicles for persuasion, revised treatments of the theories of reasoned action and planned behavior, and two new chapters on social judgment theory and stage models provide your students with the most current work on persuasion in a clear, straightforward manner. In this edition, author Daniel J. O'Keefe has given special attention to the importance of adapting (tailoring) messages to audiences to maximize persuasiveness. Each chapter has a set of review questions to guide students through the chapter's material and quickly master the concepts being introduced.
