Telepractice in Audiology provides practical information to audiologists to enable the development and delivery of a successful telepractice program. Specifically, the text discusses the technological requirements (e.g., videoconferencing equipment, remote programming software options, Internet connections, etc.), applications and models of service delivery in audiology, policy and regulatory issues, as well as future directions in the field. The use of telepractice technology, specifically the Internet and remote programming software, has the potential to improve equity of access to services and reduce the burden placed on families. Program reports, outcomes, and publications that are emerging demonstrate the ability to offer sophisticated audiological assessments with reliable outcomes. This text provides the knowledge and skills required to implement a telepractice program that could provide a range of audiological services from diagnostics to intervention and habilitation/rehabilitation. Further, different models of service delivery are presented, thus demonstrating the flexibility of a telepractice approach. Telepractice in Audiology is a useful resource for practicing clinicians as well as students training to be audiologists. In addition, teachers of the deaf, speech-language pathologists, IT support persons, and other individuals interested in the application of, or endeavoring to implement, teleaudiology programs will also benefit from this text.

Tele-AAC: Augmentative and Alternative Communication Through Telepractice is the first comprehensive resource guide to Tele-AAC. Tele-AAC is the use of telepractice specifically for providing services to individuals using augmentative and alternative communication (AAC). This text establishes Tele-AAC as a new service delivery model and promotes safe, efficacious, evidence-based, and ethical telepractice for individuals who need AAC systems. The goal is to provide readers with fundamental information about policy and service delivery of AAC services via telepractice to enable clinical practice. The text details the specific technical components unique to Tele-AAC service delivery, and how the technology, personnel, and service delivery practices may vary across settings and populations. It offers didactic and case-based content for speech-language pathologists across all levels, from introductory to advanced. Chapters are included that clarify and define the term Tele-AAC, highlight the procedures used while providing assessment and intervention via Tele-AAC, identify ethical and cultural considerations while providing Tele-AAC, and demonstrate its application in a variety of settings. The content has been enriched by the input and knowledge offered by leaders from both telepractice and AAC disciplines, and offers readers the right combination of foundational information and principles to help form a base of understanding for practitioners engaging in Tele-AAC. The field of Tele-AAC is evolving and will transform as the technology changes and advances. This text provides a threshold of understanding from which the field and practitioners can grow.

Being a Professional: Professional Competencies in Speech-Language Pathology and Audiology is designed for the professional issues course at the graduate level in a speech-language pathology or audiology program.

A how-to-guide on providing an evidence-based, patient- and family-centered care service in speech-language pathology and audiology Patient and family-centered care is a vital component of improving treatment satisfaction and measurable success. Patient and Family-Centered Speech-Language Pathology and Audiology focuses on teaching speech-language pathology and audiology students how to develop and incorporate this model into everyday practice. Carly Meyer, Nerina Scarnici, Louise Hickson, and an impressive array of international authors share personal experiences and pearls that prepare students with both scientific evidence and practical information for implementation. The content reflects a cross-collaborative approach, with contributions from speech-language pathologists and audiologists, as well as other health professionals including psychologists and occupational therapists. Key Features: Professional topics including preparation and planning for patient- and family-centered care in the practice setting, needs assessments, multidisciplinary collaboration, and cultural and linguistic diversity Real-life cases, description of evidence-based patient outcomes, and firsthand insights included in each chapter Learning objectives, boxed features such as student activities and helpful tips, questions for consideration, and end of chapter summaries enhance retention and integration of knowledge 29 video case examples that include interviews with patients, families, and clinicians, as well as demonstrations of patient- and family-centered care in action

Written by experts from around the globe, this book presents explains technical issues and clinical applications. It includes collective experiences from rehabilitation service providers in different parts of the world practicing a wide range of telerehabilitation applications. This book lays the foundations for the globalization of telerehabilitation procedures, making it possible for rehabilitation service to be delivered anywhere in the world.
